Preface

CMN 2019 aims to be a forum for the discussion of relevant scientific, and technological developments in computational mechanics, numerical methods and engineering applications. CMN 2019 is jointly organized by the Portuguese (APMTAC) and the Spanish (SEMNI) Associations and follows the previous congress editions of Madrid (2002), Lisbon (2004), Granada (2005), Porto (2007), Barcelona (2009), Coimbra (2011), Bilbao (2013), Lisbon (2015) and Valencia (2017).

The scientific program comprises six plenary lectures from internationally known researchers and is structured in almost 30 thematic sessions in different fields of research. We sincerely thank the session organizers for their contribution for the success of the congress.

The congress is open to everyone interested in numerical methods and the objective of the series is to create an excellent forum for dissemination of the latest scientific and technical developments and for the exchange of new ideas in emerging topics. We hope this can be achieved and the participants enjoy the technical and social program planned, together with the welcoming and UNESCO World Heritage city of Guimarães.

More than 275 participants from 30 countries are expected making CMN 2019 a truly international event. We are happy to share with you an exciting program composed of almost 300 contributions concerning a wide range of activities and research fields in numerical methods. The series of conferences benefits immensely from joining young participants (and the future of our community) with more senior academics and professionals, with a very attractive conference fee for young participants. Young participants totalize 40% of the participants, which is to be noted.

Thinking about the young participants, a unique presentation possibility is offered with oral (more formal and less interactive) and poster (informal and interactive) presentations of the same paper. We are also happy that three post-congress advanced software courses are offered to all participants, again at a modest fee, which total more than 50 participants.

We warmly thank the contributors, the authors, the speakers and the exhibitors of the event and wish this conference will offer you fruitful discussions and a pleasant time in Guimarães.

Guimarães, July 2019

Paulo B. Lourenço, Paulo Flores & Stéphane Clain, for APMTAC
David Greiner, Irene Arias & Manuel Tur, for SEMNI

SUMMARY

Plenary lectures	21	
Sessions		
ST1	Discrete element modelling of masonry structures	27
ST2	Geotechnics and Geoengineering	64
ST6	Computational Methods in Acoustics and Vibration	112
ST7	Meshless and Particle Formulations in Computational Mechanics	238
ST8	Unfitted discretization methods: From theory to multidisciplinary applications	266
ST9	Offshore Engineering	282
ST10	Recent Advances in Shape and Topology optimization	325
ST12	Numerical models for heat and mass transfer	331
ST13	Técnicas de reducción de modelos/Model order reduction techniques	449
ST14	Constitutive Modelling and Material Parameter Identification	454
ST15	Composites modelling: characterization, behaviour and structures	478
ST16	Metal forming processes: Formability characterization, damage and ductile fracture	515
ST17	Computational biomechanics and applications	529
ST18	Steel and composite structures	552
ST19	Vibration Problems in Structures	665
ST20	Mechanics of soft tissues Experimental and numerical techniques	724
ST21	New trends in very high order numerical methods	758
ST23	Fracture, collapse and nonlinear behaviour in concrete structures and quasi-fragile materials	764
ST25	Computational Rheology	842
ST27	Modelling of masonry structures	867
ST28	Multi-body dynamics	1013
ST29	Computational Modeling in Mechanobiology and Tissue Engineering	1091
ST30	Optimization, Metaheuristics and Evolutionary Algorithms in Civil Engineering	1096
ST31	Finite Elements	1188
ST32	Fluid mechanics	1250
ST33	Computational methods in Engineering	1294

CONTENTS

Plenary lectures

Origami engineering: geometry and mechanics <i>Glaucio H. Paulino</i>	21
Nucleation and Propagation of Fracture and Healing in Elastomers: A PhaseTransition Theory and Numerical Implementation <i>Oscar Lopez-Pamies</i>	22
Designing flexoelectric metamaterials through computational strain gradient engineering <i>Irene Arias</i>	23
Cell-centered Finite Volume methods for solving the Lagrangian form of gas dynamics and solid mechanics equations on unstructured grids <i>Pierre-Henri Maire</i>	24
Biomechanics of Some Soft-Tissues: Constitutive Modelling and Computational Aspects <i>José Luís Alves</i>	25
From Data-Driven modeling to Physically-Constrained Deep Learning in Predictive Continuum Physics <i>Manuel Dobláré</i>	26

Papers

Discrete element modelling of masonry structures

DEM modelling of dry stone retaining walls <i>Nathanaël Savalle, Éric Vincens and Fabian Dedecker</i>	27
Characterization of the structural behaviour of masonry prisms submitted to vertical actions using volumetric finite elements <i>Marcelo Rodrigo De Matos Pedreira, Rogerio De Oliveira Rodrigues, Jefferson Sidney Camacho and Maicon Marino Albertini</i>	41
A Discrete Element Model for the seismic behaviour of masonry churches in central Italy <i>Francesca Gobbin, José V. Lemos and Gianmarco de Felice</i>	59
Seismic performance of the Kuño Tambo church (Peru) <i>Nuno Mendes, José V. Lemos and Sara Zanotti</i>	60
Crosswise tension resistance of walls with different bond patterns <i>Shipeng Chen and Katalin Bagi</i>	61
Manifold Learning and Discrete Element Modeling for Diagnosis of Cracks in Masonry Structures <i>Rebecca Napolitano, Wesley Reinhart, David Sroczynski and Branko Glisic</i>	62
Rigid block modelling of historic masonry structures using mathematical programming <i>Francesco Paolo Portoli</i>	63

Geotechnics and Geoengineering

Effect of advanced drainage on the stability of tunnel faces under the water table <i>Congke Yi, Salvador Senent and Rafael Jimenez</i>	64
Distinct element method simulation of rock creep behaviour <i>Jose Gregorio Gutierrez-Ch, Salvador Senent and Rafael Jimenez</i>	72
A new factor design considering socket roughness for side shear resistance prediction of rock-socketed piles <i>Jose Gregorio Gutierrez-Ch, Svetlana Melentijevic, Salvador Senent and Rafael Jimenez</i>	73
Evolution of pore pressure in a cohesive soil under cyclic loading <i>Daniel Panique Lazcano, Hernan Patiño, Rubén Galindo Aires and Claudio Olalla</i>	74
Avaliação do efeito das explosões de desmonte de rocha em barragens de betão com base num modelo numérico do maciço e barragem e comparação com resultados observados <i>Ricardo Fonseca, Jorge Pereira Gomes, José V. Lemos and Ricardo Resende</i>	91

Obtaining the Equivalent Properties of Fracture Media Using Finite Element Method with Embedded Discontinuities	92
<i>Daniel Melo, Leidy Alvarez, Leonardo Guimarães and Leila Beserra</i>	
Large deformation analysis of ice scour process in dense sand	103
<i>Hodjat Shiri and Afrouz Nematzadeh</i>	
Computational methods in acoustics and vibration	
Optimización acústica de catalizadores de automoción	112
<i>Eva María Sánchez-Orgaz, Francisco David Denia, Borja Ferrández, José Martínez-Casas and Enrique Nadal</i>	
A numerical study of the nonlinear behavior of ultrasound in bubbly liquids	126
<i>Maria Teresa Tejedor Sastre and Christian Vanhille</i>	
Técnica de diagonalización para la mejora computacional de la integración numérica en dinámica ferroviaria	137
<i>Juan Giner-Navarro, José Martínez-Casas, Francisco David Denia and Luis Baeza</i>	
Numerical study of the insertion of cochlear implants	154
<i>Bruno Areias, Marco Parente, Fernanda Gentil, Eurico Almeida and Renato Natal Jorge</i>	
Mitigación del ruido de ruedas ferroviarias mediante un enfoque modal	155
<i>Jorge Gutiérrez-Gil, Xavier Garcia-Andrés, José Martínez-Casas and Francisco David Denia</i>	
Control pasivo de ruido ferroviario mediante optimización topológica y formulación mixta	161
<i>Borja Ferrandiz, Francisco David Denia, José Martínez-Casas, Enrique Nadal and Juan José Ródenas</i>	
Numerical Investigation of Wave Propagation in Suspended Cables	174
<i>João Rodrigues, Maria Do Carmo Coimbra, João Santos and Elsa Caetano</i>	
p-Adaptive Hybridized DG Methods for acoustic fluid-structure interaction problem	188
<i>Leonardo Mello, Iury Igreja and Abimael Loula</i>	
Numerical Silent Boundary Conditions Applied to Elastic Wave	205
<i>Carlos Eduardo Silva, Leandro Carlos Gazoni, Marcus Casagrande and José Luis Drummond Alves</i>	
The Impact-Echo method applied to the auscultation of bridges: Numerical study	206
<i>Hajer Rezgui Chaabouni, Sylvie Yotte and Mokhfi Takarli</i>	
A very fast flux reconstruction for high-order Finite Volume schemes	207
<i>Luis Ramírez, Pablo Ouro, Javier Fernández-Fidalgo, Xesus Nogueira and Fermin Navarrina</i>	
Some approaches for the mitigation of vibrations induced by subway railway traffic	208
<i>Patrícia Lopes, Pedro Alves Costa, Jesús Fernández, António Cardoso and Rui Calçada</i>	
Efecto de la ubicación de los altavoces en dispositivos tipo "Tablet"	225
<i>Pedro Poveda-Martínez, Luis M. Godinho, Paulo A. Mendes, Jesús Carbajo-San-Martín and Jaime Ramis-Soriano</i>	
Sound absorption numerical modelling of porous concrete resonators using a FEM model	226
<i>Paulo Amado-Mendes, Luis Godinho, Matheus Pereira, Jesús Carbajo and Jaime Ramis</i>	
Time-domain FEM simulation of the propagation of pile-driving induced vibrations	227
<i>Tales Sofiste, Luis Godinho, Pedro Alves Costa and Delfim Soares Jr.</i>	
Optimized computational methods for the calculation of dispersion diagrams	237
<i>S. Sánchez Esteve and I. Romero</i>	
Meshless and particle formulations in computational mechanics	
Dynamic Analysis of Reinforced Concrete Structures via Finite Elements, Applying The Semi-embedded Method For Steel Reinforcing Bars Modelling	238
<i>Bryan Pantoja-Rosero, Pedro Luna-Cunha and Raul Durand</i>	
A 3D homogenization technique for the mechanical characterization of trabecular bone tissue	254
<i>Marco Marques, Jorge Belinha, António Fonseca Oliveira, M.C. Manzanares Céspedes and Renato Natal Jorge</i>	
Comparison of different geometries of chitosan nerve guidance channels using meshless methods	256
<i>Joana Gomes, Jorge Belinha and Renato Natal Jorge</i>	

Studding in silico the capillary network <i>Ana Guerra, Jorge Belinha and Renato Natal Jorge</i>	257
A modified Hill yield criterion combined with a meshless method formulation for the elasto-plastic analysis of thermoplastics <i>Daniel Rodrigues, Jorge Belinha, Lúcia Dinis and Renato Natal Jorge</i>	258
A novel growth and remodeling model suitable for distinct biological tissues – bone and myocardium <i>M. M. A. Peyroteo, J. Belinha, J. A. C. F. Leite Moreira and R. M. Natal Jorge</i>	259
A novel numerical approach to simulate blood clots using meshless <i>M.I.A. Barbosa, Jorge Belinha and R.M. Natal Jorge</i>	260
Meshfree vs. mesh-based modelling of turbulent flows in dams <i>Andreia Moreira, Agnès Leroy, Damien Violeau and Francisco Taveira Pinto</i>	261
Computational simulation of the cupula behavior during inner ear pathological scenarios <i>Carla F. Santos, Jorge Belinha, Fernanda Gentil, Marco Parente and Renato Natal Jorge</i>	262
Simulating the extrusion process using a radial point interpolation meshless method <i>R Costa, M Barbosa, Jorge Belinha, Lúcia Dinis and Renato Natal Jorge</i>	263
PFEM-DEM coupling for the simulation of free-surface particulate flows <i>Ignasi Pouplana, A. Franci, G. Casas, M. Celigueta, J. Gonzalez-Usua and E. Onate</i>	264
An academic software to solve nonlinear computational mechanics problems using meshless methods <i>J. Belinha, M.I.A. Barbosa, L.M.J.S. Dinis and R.M. Natal Jorge</i>	265
Unfitted discretization methods: From theory to multidisciplinary applications	
Optimización Topológica 3D con refinamiento h-adaptativo usando el Método de los Elementos Finitos mediante Mallados Cartesianos (cgFEM) <i>David Muñoz, Juan José Ródenas, Enrique Nadal and José Albelda</i>	266
Implementation and performance of the aggregated unfitted finite element method at large scales <i>Francesc Verdugo, Alberto F. Martín and Santiago Badia</i>	267
Efecto de las técnicas de recovery en la calidad de la estimación de error en problemas de contacto con el Cartesian grid finite element method (cgFEM) <i>José Manuel Navarro-Jiménez, Héctor Navarro-García, Juan José Ródenas and Manuel Tur</i>	268
Método de estabilización para los contornos Neumann en el entorno Cartesina Grid Finite Element Method <i>Enrique Nadal, Manuel Tur, José Manuel Navarro, José Albelda and Juan José Ródenas</i>	269
Implementación del método Discontinuous Galerkin sobre la estructura de malla cgFEM para la resolución de las ecuaciones de Maxwell <i>Héctor Navarro García, Rubén Sevilla, José Manuel Navarro Jiménez and Juan José Ródenas</i>	280
Embedded Computational Fluid Dynamics techniques for Fluid-Structure Interaction problems <i>Rubén Zorrilla, Riccardo Rossi and Eugenio Oñate</i>	281
Offshore Engineering	
Optimal phytoremediation methods for heavy metals removal <i>Aurea Martínez, Lino J. Alvarez-Vázquez, Carmen Rodríguez Iglesias, Miguel E. Vázquez-Méndez and Miguel A. Vilar</i>	282
Performance of offshore modular structures for confined explosion <i>Damjan Čekerevac, Constança Rigueiro and Eduardo Pereira</i>	293
Development of a Numerical Model of a Wave-Maker Flume <i>Daniel Oliveira, Aldina Santiago, Constança Rigueiro and J.P.P.G Lopes de Almeida</i>	310
Dissipative beam-to-column connections for offshore structures <i>Ana Santos, Aldina Santiago and Gianvittorio Rizzano</i>	311
A triangular Vortex Generator modeling on a DU97-W-300 airfoil by a source term model <i>Lander Galera, Pablo Martínez-Filgueira, Unai Fernández, Alberto Peña, Iñigo Errasti and Jesús M. Blanco</i>	324

Recent Advances in Shape and Topology optimization

Topological Optimization of structures with isogeometric analysis	325
<i>Diego Villalba Rama, José París López, Ignasi Colominas Ezponda, Manuel Casteleiro Maldonado and Fermín Navarrina Martínez</i>	
A new stabilisation approach for level-set based topology optimisation of hyperelastic materials	326
<i>Rogelio Ortigosa, Jesús Martínez-Frutos, David Herrero-Pérez and Antonio Gil</i>	
Structural optimization under internal porosity constraints using topological derivatives	327
<i>Jesús Martínez-Frutos, Grégoire Allaire, Charles Dapogny and Francisco Periago</i>	
SIMP-ALL : a generalized SIMP method based on the topological derivative	328
<i>Alex Ferrer</i>	
Dynamic response optimization of offshore substructures using a new formulation for time-dependent structural constraints	329
<i>Iván Couceiro, José París, Fermín Navarrina, Santiago Martínez, Raquel Guizán, Ignasi Colominas and Manuel Casteleiro</i>	
Efficient Topology Optimization on Hybrid CPU-GPU platforms	330
<i>David Herrero-Pérez and Rogelio Ortigosa</i>	
Numerical models for heat and mass transfer	
Finite Element Simulation of Double-Diffusive Convection Flows	331
<i>Jorge Milhazes and Pedro Coelho</i>	
Finite volume model for a transcritical CO₂ tube-in-tube gas cooler	350
<i>Francisco Lamas and Vitor Costa</i>	
A 2D transient physical model of a coated tube adsorber for adsorption heat pumps	369
<i>João Dias and Vitor Costa</i>	
Liquid Metal Batteries: coupling electrochemistry, heat and mass transfer with magnetohydrodynamics	384
<i>Norbert Weber, Wietze Herreman, Gerrit Maik Horstmann, Caroline Nore, Paolo Personnettaz and Tom Weier</i>	
Error Representation and Space-Time Goal-Oriented Adaptivity for the Advection-Diffusion Equation employing Explicit Runge-Kutta Methods	385
<i>Judit Muñoz-Matute, Victor M. Calo, David Pardo and Elisabete Alberdi Celaya</i>	
Quantifying and Accounting for Uncertainties in a Jet Impingement Process	386
<i>Flavia Barbosa, Wael Hajj Ali, Senhorinha Teixeira, José Carlos Teixeira and Pierre Lermusiaux</i>	
Numerical Analysis of a Jet Impinging a Step Surface	388
<i>Flavia Barbosa, Senhorinha Teixeira and José Carlos Teixeira</i>	
Cavitation Modeling Methodology in an All-Speed Solver for Cryogenic Fluids	389
<i>Siddharth Thakur and Jeffrey Wright</i>	
Very high-order accurate finite volume scheme on polygonal meshes for general boundary conditions on curved boundaries	408
<i>Ricardo Costa, João Nóbrega, Stéphane Clain and Gaspar Machado</i>	
Thermal modelling of an active façade integrating a metallic unglazed thermal collector	409
<i>Peru Elguezabal, Alex López, Jesús M. Blanco and Jose A. Chica</i>	
Modelling and simulation of gas quenching in tool steels	410
<i>António Andrade-Campos and Adélio Cavadas</i>	
Numerical Simulation of Refractory Masonry Subjected to Cyclic Temperature Loading	429
<i>Pratik N. Gajjar, João M. Pereira and Paulo B. Lourenço</i>	
Variational Multiscale error estimators for the adaptive mesh refinement of compressible flow simulations	430
<i>Camilo Bayona, Ramon Codina and Joan Baiges</i>	
High-order ENATE for transport problems	431
<i>Víctor Javier Llorente Lázaro and Antonio Pascau Benito</i>	
Numerical simulation of active IRT applied to layered building systems	432
<i>Catarina Serra, António Tadeu and Nuno Simões</i>	

Numerical analysis of stainless steel frames subject to fire <i>Guillermo Segura, Sheida Afshan, Enrique Mirambell and Esther Real</i>	433
Simulação das condições ambientais de um posto de transformação da rede elétrica <i>Nuno Simoes and Joana Prata</i>	442
Implementation of the Sequential Element Admission and Rejection (SERA) method in steady-state heat transfer problems <i>Alain Garaigordobil and Rubén Ansolá</i>	443
Finite Element based micro modelling of masonry structures subjected to fire <i>Ravi Prakash Patnayakuni, João Pereira, Miguel Azenha and Paulo Lourenço</i>	444
Design and optimization of an energy harvesting system for high temperature industry <i>Oscar García-López, Jose Luis Fernandez, Jesus Esarte and Estibaliz Armendariz</i>	445
Development and verification of an open-source computational framework to simulate injection moulding <i>João Pedro, Célio Fernandes, João Romero, Ricardo Costa and João Nóbrega</i>	446
Creep modelling for refractory materials used in furnace linings <i>Thais Soares, Miguel Azenha and Paulo Lourenço</i>	447
CFD study of a new system for night cooling in office buildings <i>Miguel Lança, Pedro Coelho and João Viegas</i>	448
Técnicas de reducción de modelos/Model order reduction techniques	
Multiscale simulations of composite materials using High Performance Reduced Order Modelling technique: a case study <i>Marcelo Raschi, Oriol Lloberas-Valls and Javier Oliver</i>	449
Learning constitutive models from data <i>David Gonzalez, Francisco Chinesta and Elias Cueto</i>	450
Data-driven learning of slosh dynamics <i>Beatriz Moya, David Gonzalez, Iciar Alfaro, Francisco Chinesta and Elias Cueto</i>	451
Greedy reduced basis with error control for 3D inversion in geophysics <i>Olga Gelabert-Ortega, Sergio Zlotnik, Juan Afonso and Pedro Diez</i>	452
Generalized solution of parameterized incompressible flows <i>Antonio Huerta, Matteo Giacomini and Ruben Sevilla</i>	453
Constitutive Modelling and Material Parameter Identification	
On the Computational Performance of Advanced Optimization Methods in Mechanical Design <i>Miguel Guimarães Oliveira, João Dias de Oliveira and António Andrade Campos</i>	454
Constitutive Model for the Non-Linear Cyclic Behaviour of Masonry Structures <i>Marianthi Sousamli, Francesco Messali and Jan Rots</i>	455
Influence of the yield surface curvature on the strain distribution in a hole expansion test <i>B. Martins, Marta C. Oliveira, Diogo M. Neto, J L Alves and Luís F. Menezes</i>	456
Measurement of the thickness distribution by digital image processing techniques <i>Edmundo Sérgio, João R. Barros, Diogo M. Neto, Marta C. Oliveira, Rui M. Leal, José L. Alves and Luís F. Menezes</i>	457
Earthquake-induced damage localization in a monumental masonry bell-tower using incremental dynamic analysis <i>Alban Kita, Nicola Cavalagli, Maria Giovanna Masciotta, Paulo B. Lourenço and Filippo Ubertini</i>	471
A Model for the Prediction of Mechanical Properties of Parts Produced by Fused Filament Fabrication <i>Tiago Gomes, Mylene Cadete, João Oliveira and Victor Neto</i>	472
Verification and Validation of solids4Foam solver in extensional rheometry tests <i>Mohammadreza Aali, Olga Sousa Carneiro and João Miguel Nóbrega</i>	473
Periodic Cellular Solids – Experimental Scale-Size Effect Analysis <i>Miguel Reis Silva, João Oliveira, António Pereira, Nuno Alves, Álvaro Sampaio and António Pontes</i>	474

Analytical and semi-analytical solutions for the Poiseuille-Couette flow of a generalised simplified Phan-Thien-Tanner fluid	475
<i>Angela Ribau, Luís Ferrás, Maria Luísa Morgado, Magda Rebelo and Alexandre Afonso</i>	
Calibration of material models applied to impact mechanics using a new statistical approach	477
<i>J. de Pablos, E. Menga and I. Romero</i>	
Composites modelling: characterization, behaviour and structures	
Numerical Modeling of a Bamboo Structure	478
<i>Gislaine Bianchi, Thiago Francisco Da Trentin, José Melges and Jorge Akasaki</i>	
A dynamic spring element model for the prediction of longitudinal failure of polymer composites	491
<i>Rodrigo Tavares, Fermín Otero, Joan Baiges, Albert Turon and Pedro Camanho</i>	
Modelling mechanical lightning loads and damage in carbon fibre-reinforced polymers	492
<i>Albertino Arteiro, Christian Karch and Pedro P. Camanho</i>	
Analysis of onset and growth of multiple debonds by means of an Abaqus implementation of the CCFFM+LEBIM	493
<i>Mar Muñoz-Reja, Luis Távara, Vladislav Mantic and Christos Panagiotopoulos</i>	
An analytical model for the textile-to-mortar bond behaviour	494
<i>Ali Dalalbashi, Bahman Ghiassi and Daniel V. Oliveira</i>	
Production of brick constituted with waste mica and polyurethane	502
<i>Roberto Carlos Ribeiro, Carolina Henriques, Márcia Oliveira and Francisco Hollanda Vidal</i>	
Modelling of ionic liquid/polymer composites as actuators	507
<i>Liliana Fernandes, Daniela Correia and Senentxu Lanceros-Mendéz</i>	
Finite displacement and rotation implementation of the Linear Elastic Brittle Interface Model applied to structured interfaces in Double Cantilever Beam specimens.	508
<i>Lorenzo García-Guzmán, Luis Távara and José Reinoso</i>	
Metal forming processes: Formability characterization, damage and ductile fracture	
Numerical study on hole expansion tests of metal sheets	515
<i>Armando Marques, Pedro Prates, Marta Oliveira and José Fernandes</i>	
An assessment of an isotropic coupled micromechanical damage model for porous solids with matrix exhibiting tension–compression asymmetry	522
<i>João Brito, Marta Oliveira, Diogo Neto, Luís Alves and Luís Menezes</i>	
Prediction of ductile fracture of a DP780 steel using uncoupled damage models	523
<i>Carlos Andrade, Marta Oliveira, Diogo Neto, José Alves and Luís Menezes</i>	
On the accurate modelling of the U drawing of a high strength DP600 steel	524
<i>Javier Mendieta, Ander Martínez, Javier Trinidad, Nagore Otegi, Lander Galdos, Eneko Saenz de Argandoña and Joseba Mendiguren</i>	
AA7075 W-tempor Sheet metal forming material behaviour modelling	525
<i>Biotza Zubia, Unai Ibarretxe, Nagore Otegi, Eneko Saenz de Argandoña, Javier Trinidad, Lander Galdos and Joseba Mendiguren</i>	
The influence of different yield criteria in the finite element simulation of a cylindrical cup - application to dual phase steels	526
<i>Rui Amaral, Abel Santos, Sara Miranda and Jose Cesar de Sá</i>	
Assessment of material scatter and mechanical behaviour in sheet metal forming	527
<i>Sara Miranda, Abel Santos, Rui Amaral, Luis Malheiro and José Fernandes</i>	
Phase-field diffusive approach within a microstructural ductile damage framework	528
<i>E. Azinpour, J. Cesar de Sá and A. Santos</i>	
Computational biomechanics and applications	
A multi-layered in-silico model for computing wall stresses in abdominal aortic aneurysms with non-atherosclerotic intimal thickening	529
<i>Mario de Lucio, Marcos Fernández, Jacobo Díaz, Luis Romera and Francisco Álvarez Marcos</i>	
Modified velocity terms of Reynolds equation in a spherical coordinate system	530
<i>Ehsan Askari</i>	

Elastohydrodynamic lubrication analysis of polyethylene hip arthroplasties using a multibody dynamics approach	531
<i>Ehsan Askari</i>	
Theoretical development and numerical implementation of a physically-based regularization method for Traction Force Microscopy	532
<i>Jose A. Sanz-Herrera, Jorge Barrasa-Fano and Hans Van Oosterwyck</i>	
Análisis biomecánico de la cirugía de eliminación del espolón del hueso calcáneo mediante simulación por elementos finitos.	533
<i>Javier Bayod López, Ricardo Becerro de Bengoa Vallejo and Marta Losa Iglesias</i>	
Methodology for numerical simulation of the degradation process of 3D printed biopolymeric scaffolds	534
<i>Jacob Abdelfatah Ndioubnane, Rubén Paz Hernandez, Mario Monzón Verona and Gabriel Winter Althaus</i>	
Optimization of the design of 3D-printed scaffolds for tissue engineering applications	544
<i>Pablo Blázquez Carmona, Jose Antonio Sanz Herrera, Juan Mora Macías, Jaime Domínguez Abascal and Esther Reina Romo</i>	
Contact pattern changes at the ankle after ligamentous injuries	546
<i>Gonçalo Marta, João Folgado, Francisco Guerra-Pinto and Carlos Quental</i>	
Comportamiento de la Articulación subtalar durante la aplicación de cargas axiales experimentalmente	547
<i>Luis Padrón Cabrera and Javier Bayod López</i>	
Effect of haptic geometry on the mechanical stability of intraocular lenses using finite element analysis	548
<i>Iulen Cabeza, Miguel Angel Ariza-Gracia, Laura Remon and Begoña Calvo</i>	
Use of histological data to predict the mechanical response of vaginal tissue to ball burst tests	549
<i>João Pedro Ferreira, Rita Rynkevici, Pedro Martins, Marco Parente and António Augusto Fernandes</i>	
On the Numerical Simulation of the Uterine Contractions and Foetus Expulsion using a Chemo-Mechanical Constitutive Model	550
<i>Maria Vila Pouca, João Ferreira, Dulce Oliveira, Marco Parente and Renato Natal Jorge</i>	
Gait Analysis Using Inverse Dynamics and the complete Musculoskeletal System: Planar Versus Spatial Models	551
<i>Jorge Ambrosio, Carlos Quental, Helder Oliveira and Stefanie Brandle</i>	
Steel and composite structures	
On the DSM Design of Cold-Formed Steel Columns Failing in Global Modes	552
<i>Pedro Dinis and Dinar Camotim</i>	
Finite element model approach for semi-rigid joints	553
<i>Ruth Gutierrez, Alfonso Loureiro, Jose Manuel Reinoso and Manuel Lopez</i>	
Comportamento de placas esbeltas de aço inoxidável a temperaturas elevadas	554
<i>Flávio Arrais, Nuno Lopes, Paulo Vila Real and Carlos Couto</i>	
Método Geral para verificação da resistência ao fogo de colunas de inércia variável com secções transversais de classe 4: uma nova proposta de cálculo	567
<i>Élio Maia, Carlos Couto, Paulo Vila Real and Nuno Lopes</i>	
Influência da distribuição não uniforme de temperaturas no comportamento de vigas I sujeitas a temperaturas elevadas	580
<i>Élio Maia, Carlos Couto, Paulo Vila Real and Nuno Lopes</i>	
Numerical Parametric Study of Stiffened Cold-Formed Steel Columns in Fire	599
<i>Luís Laim, Mariana Ferreira, Helder Craveiro and Aldina Santiago</i>	
Discrete optimization of steel frames with semi-rigid connections and column bases in second-order analysis	609
<i>Marcos Henrique Bossardi Borges, Adelano Esposito and Herbert Martins Gomes</i>	
The air gap effect on the fire resistance of composite slab with steel deck	610
<i>Paulo Piloto, Carlos Balsa, Lucas Mognon and Ronaldo Rigobello</i>	
Validation models on the fire resistance of composite slab with steel deck	625
<i>Paulo Piloto, Carlos Balsa, Fernando Ribeiro, Ronaldo Rigobello, Lucas Santos and Érica Kimura</i>	

Numerical analysis of instability failure modes of cellular steel beams in fire conditions	643
<i>Luis Mesquita, Jaqueline Alves Silva and Paola Regina Dalcanal</i>	
Evaluation of the Rotation Capacity of Steel Beams using Advanced Nonlinear Analysis	644
<i>A. I. Mohabedine, Y. W. Koudri, J. A. F. O. C. Correia and J. M. Castro</i>	
Torsional behaviour of I-section beams with supports that restrain a single flange	645
<i>Miguel Pedrosa Ferreira, Paulo Providência and Anísio Andrade</i>	
Static behavior of porous functionally graded plates using layerwise approach	664
<i>Joaquim Barbosa, Ana Mota and Amelia Loja</i>	
Vibration Problems in Structures	
The influence of the trial function on the determination of the critical buckling load by the Rayleigh method	665
<i>Alexandre de Macêdo Wahrhaftig and Kaique Moreira Matos Magalhães</i>	
Mass matrix and equivalent nodal forces of the regular linear prismatic finite element	676
<i>Marcelo Cavalcanti Silva and Rogerio De Oliveira Rodrigues</i>	
Designing a footbridge with integrated TMD: Improvement assessment	688
<i>Carlos Martín de la Concha Renedo, Iván Díaz Muñoz and Jaime García Palacios</i>	
Designing multiple tuned mass dampers for multi-mode control of steel footbridges	704

Keywords: Vortex Generators, Source Term Model, Numerical modelling, Wind turbine, Flow control

Abstract. *The importance of improving the performance of thick airfoils usually used in multiple megawatt wind turbines in offshore platforms has increased in the last few years. The main objective of these airfoils is to ensure the blade structure rather than have a good aerodynamic performance. Vortex Generators (VGs) excel in this particular aspect due to its low cost of installation and its simplicity of operation. VGs are effective passive flow control devices when approaching the problem of improving the aerodynamic response of thick airfoils and delay flow separation. In the current work, the airfoil DU97-W-300 has been simulated with a VG located on the suction surface.*

In order to define as best as possible the existence of the VG and not increase the density of the CFD mesh a source term model has been used. The main goal of this article is to test the suitability of this kind of model by comparing the CFD results with experimental data of the lift and drag coefficients. RANS based simulations have been used in order to simulate the performance of the VG on the airfoil. After the comparison of coefficients, a study of the evolution of the vortex generated by the VG model is made by studying the primary vortex vertical path, the vortex strength by studying the circulation and the size of the vortex at different angles of attack in order to understand how the VG performs at $Re=2 \cdot 10^6$.

Acknowledgement. Authors are grateful to the Basque Government for funding this research through projects IT781-13 and IT1314-19 and to all those involved in the different stages for their guidance and invaluable help.

Certificate

We confirm that

Jesus Maria Blanco

participated in the
Congress on Numerical Methods in Engineering,
CMN2019,
in July 01-03, 2019.

Guimarães, July 03

Organizing Committee
