

# Solar Key Technologies to Power Low Orbit Satellites, SkyPlus

Universidad del País Vasco Euskal Herriko Unibertsitatea

expediente: ZL-2019/00870

The objective of the SkyPlus project is to investigate and develop new technologies of solar cells for their application powering low orbit satellites.

The structure of the cells is based on III-V, Al Ga In – P As Sb compounds on a Ge substrate. These technologies have as final target their industrial manufacturing in a spin-on company from the UPV/EHU.
