Advanced Search

This is a more precise search as it allows you to perform it in different indexes, using Boolean operators or limiting the searches to one or several databases of your choice.

The screenshot shows the top navigation bar of the ehuBiblioteka website. It includes the university logo, the name 'ehuBiblioteka', and a 'My Account' dropdown. Below the navigation bar, there are links for 'Advanced search', 'Course Reserves', and 'Resources'. On the right side, there are links for 'Search history' and 'Saved Items (0)'. The main content area features a search bar with the placeholder text 'Search' and a blue 'Search' button. A yellow arrow points to the search bar, and another yellow arrow points to the 'Advanced search' link below the search bar.

Using Search Indexes

You can choose to conduct the search in a specific field: author, title, subject... or combine fields if you have more information. If you don't choose anything, it will search for your term in all indexes, treating it as a keyword.

This screenshot is identical to the one above, showing the top navigation bar and the search bar on the ehuBiblioteka website.

Advanced Search

The screenshot displays the 'Advanced Search' interface. It features three rows of search criteria. Each row has an 'Operator' dropdown, a 'Search Index' dropdown, and a 'Search Term' text box. The first row has 'Keyword' selected for the index and 'Plato' for the term. The second row has 'AND' selected for the operator, 'Title' for the index, and 'Republic' for the term. The third row has 'AND' for the operator, 'Author' for the index, and an empty text box for the term. Below the rows are 'Add row', 'Clear', and 'Search' buttons. On the right side, there are sections for 'Databases' (33 Selected) with 'Save Changes' and 'Reset' buttons, and 'Searching Databases' (33 Selected) with a list of checked options: 'All', 'ACM Digital Library', 'Annual Reviews', and 'Brill Books'.

Searching with Boolean Operators

The Boolean search operators are **AND**, **OR** and **NOT**. You can use these operators to narrow down your search.

- **AND** combines search terms so that each search result contains all of the terms.
 - For example, Social Media AND Facebook finds articles that contain both Social Media and Facebook
- **Or** combines search terms so that each search result contains at least one of the terms.
 - For example, Facebook OR Twitter
- **Not** excludes terms so that each search result does not contain any of the terms that follow it.
 - For example, Facebook NOT Twitter

Advanced Search

Selecting a Database

Discovery, in addition to the documents that make up our physical collection (integrated into the WorldCat database), searches the electronic publication platforms subscribed to by UPV/EHU. You can limit the search to a single database, several of them, or launch it across all resources that make up the catalogue (both physical and electronic). By default, all multidisciplinary databases are selected, so you can search in all of them or select only those that interest you. Click on “Select all within the group” to check or uncheck according to your needs; don't forget to click on “Save changes.”

To search in the UPV/EHU catalogue, **WORLDCAT** MUST BE SELECTED.
